- DryFreight™
- ColdSAVER™
- EuroCEL™
- Hinged Truss II™
- Premium Plate™

CommandLIFT™ can be used on all WHITING, double-torsion, spring balancer equipped, roll-up doors.

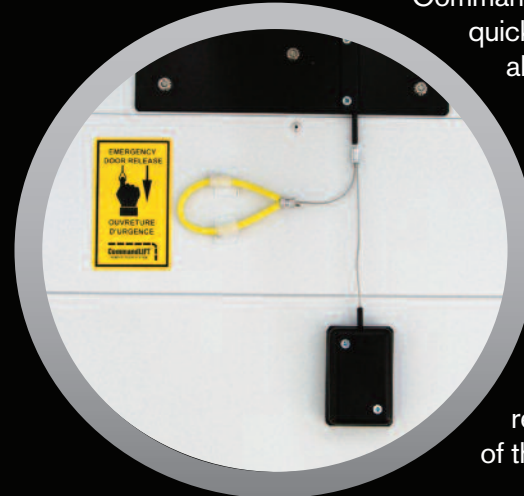

CommandLIFT™ is equipped with a pair of integral Luma-Bar lights which illuminate the rear cargo area of the truck or trailer.

CommandLIFT™ offers a smooth controlled operation that will help to reduce door maintenance, downtime and increase the expected service life of components.

CommandLIFT™ operates with an FCC approved, FM signal. Each remote control transmitter comes with two buttons. One button operates the door and the other button operates the integral Luma-Bar lighting system.

CommandLIFT™ includes a quick release system that allows the roll-up door to be operated manually at any time. The quick release system can be used by either pulling the release handle on the inside of the door or by using the key release on the outside of the door.

CommandLIFT's™ door opening system can be adjusted to pull the door completely clear of the header.

CommandLIFT™ ensures that your cargo is always secure when the roll-up door is closed, even if the door latch has been left in the open position.

CommandLIFT™ senses obstructions in the path of the door movement. CommandLIFT™ will stop the door and reverse its travel a few inches to allow the obstruction to be safely removed.
